DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Morich et al. P.N. 5,545,996 (Morich).

Morich discloses a gradient coil for use in a MRI apparatus having Lorentz force compensation. Applicant's attention is directed to claim 1-12 and lines 26-44 of col. 4. The gradient coil depicted in Fig. 2A has additional windings 64 with respect to the conventional coil. The additional windings 64 carry current in an opposite direction as shown, to compensate for Lorentz forces responsive to both the axial and radial components of the main magnetic field. Note that the gradient coil in Morich is shielded. See Fig. 2B. Morich meets all the limitations of the claims at issue.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Heid et al., Melcher et al., and Sellers et al., all disclose gradient coils that are compensated for Lorentz forces. Note the abstract of each of their disclosures.
